This volume provides school-based practitioners with a comprehensive and comparative guide to the strategic interventions, therapeutic modalities, and treatment approaches that are most commonly and effectively used in educational settings. Three main sections of the text present a foundation of universal interventions, targeted interventions, and alternative interventions appropriate for use in schools. Unifying the chapters are two central case examples, allowing the reader to see and evaluate the strengths and potential challenges of each technique in a familiar situation. This emphasis on case examples and the comparative structure of the volume will provide a level of hands-on and practical learning that is helpful for both students and mental health practitioners working in schools for the first time, and as a resource for more seasoned professionals who need to expand the tools at their disposal.

Advances in School Mental Health Promotion, 4(3). The effectiveness of a universal school-based programme on coping and mental health: Effective advocacy for school-based mental health programs. I M. D. Weist (red.), Handbook of school mental health: Advancing practice and research. PASR.
