Corpus begins with the argument that traditional disciplines are unable to fully apprehend the body and embodiment and that critical study of these topics urgently demands interdisciplinary approaches. The collection's 14 previously unpublished essays grapple with the place of bodies in a range of twenty-first century knowledge practices, including trauma, surveillance, aging, fat, food, feminist technoscience, death, disability, biopolitics, and race, among others. The book's projected audience includes teachers and scholars of bodies and embodiment, interdisciplinary scholars and practitioners, and scholars interested in the any of the substantive content covered in the book.

The collection could be adopted in courses on the body at advanced undergraduate and graduate levels, including: cultural studies queer, gender and sexuality studies body and power biopolitics intersectional approaches to the body anthropology of the body sociology of the body embodiment and space digital bodies anthropology of knowledge production health, illness, and medicine studies science, knowledge, and technology studies and philosophy and social theory.

Bukspyttkjertelen (pancreas) ligger i øvre, bakre bukvegg og består av hode (caput), kropp (corpus) og hale (cauda), samt et nettverk av gangsystemer. Det tidlige samspillet. Barns utvikling handler om samspill mellom

barnet og miljøet, hvor transaksjoner mellom barnets genetisk betingede styrke og sårbarhet. Kort om. Plutselig sensorinevralt høretap er vanligvis unilateralt (bilateralt hos
